

## Boiling Water Units

The new Robatherm automatic filling Boiling Water Unit is designed with today's energy conscious user in mind. A timer allows you to program when boiling water is not required to turn the unit off for maximum savings, whilst a clever sleep mode senses when no one is around and powers down to conserve energy.

The new Robatherm units will be available after stocks of the existing models are depleted. We estimate this will be during May. The new Roband Catalogue provides product information on the new Robatherm units on page 15. Pricing information is overleaf.

- Saves energy with electronic timer control and sleep mode
- Simple and intuitive programming, backlit LED screen activates when needed
- Automatic filling
- Copper internal tank
- Stainless steel external cover
- Boiling point automatically adjusts depending on altitude
